PROJECT CARD - Modec ZEV - Coventry

Brief: CCPD were employed to undertake full decorative refurbishment to the production line warehouse and offices at Modec ZEV. This entailed full redecoration to all structural steel work, concrete floors, ceiling and wall lining panels and block work, production cranes, pipework and guard rails within the warehouse as well as ceilings, walls, skirting, doors and frames within the offices.

Within the warehouse, 4000m² of flooring was prepared by a combination of manual abrasion and vacuum blasting to remove surfaces contaminants, previous coatings and provide key for the new coating. A high performance 2 pack epoxy system was applied in a variety of colours to provide appropriate warehouse demarcation lines in an effort to improve safety for Modec employees and visitors. Structural steel was cleaned down and coated in an aluminium based system to improve the aesthetics of the area and provide long term protection.

The offices were refurbished as part of dilapidation requirements, for which, a customised colour was produced to match the organisations marketing aesthetic. Works were in part completed out of hours to reduce any inconvenience to the working day.

Within the warehouse all emulsion paints were spray applied to reduce time requirements and thus remove any interference caused by the refurbishment to the company's long term production. CCPD acted as a main contractor, also employing other trades to undertake roof, gutter and floor repairs.
